

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A facility display apparatus comprising:

a setting means-unit for setting a display mode of facilities selected by a user from a plurality of selectable display modes, the selectable display modes including a mode for displaying facilities as a moving picture and a mode for displaying facilities as a still picture;

a facility identifying means-unit for identifying facilities at a point of interest selected by the user from a plurality of selectable points of interest, the facilities being identified to be displayed; and

a display means-unit for displaying on a map at least one of a moving picture and a still picture of the facilities identified by said facility identifying means-unit in accordance with the display mode set by said setting-means unit,

wherein:

the map illustrates a route from a present geographical location of the user to the point of interest,

when the user selects the mode for displaying facilities as a moving picture, said display means-unit displays the moving picture of the identified facilities on the map, the moving picture automatically rotating a three-dimensional image of the identified facilities by a preset amount to provide multiple views of the identified facilities from multiple directions, the three-dimensional image being automatically rotated the same amount regardless of which facilities are identified by the facility identifying means and regardless of the user's geographical location while the moving picture is displayed, and

the identified facilities comprises at least one physical object having a fixed geographical location at the selected point of interest.

2. (Currently Amended) The facility display apparatus according to claim 1, wherein said facility identifying means-unit identifies the facilities to be displayed by recognizing speech of a user.

3. (Currently Amended) The facility display apparatus according to claim 1, wherein said facility identifying ~~means~~unit identifies the facilities to be displayed according to operation of input keys by a user.

4. (Currently Amended) The facility display apparatus according to claim 1, wherein
said display ~~means~~unit three-dimensionally displays an image of the facilities identified by said facility identifying ~~means~~unit on a wide-area map, and zooms in on the image of the facilities, and
the current position of the user is different than the location of the identified facilities with respect to the wide-area map.

5. (Currently Amended) The facility display apparatus according to claim 4, wherein said display ~~means~~unit rotates the image of the identified facilities simultaneously with the zoom in, or after completing the zoom in, when the mode for displaying facilities as a moving picture is selected by the user.

6. (Currently Amended) The facility display apparatus according to claim 4, wherein said display ~~means~~unit zooms in on the image of the identified facilities while maintaining a whole body of the facilities within a display area on a display.

7. (Currently Amended) The facility display apparatus according to claim 4, wherein when receiving an enlarged display request of the identified facilities from the user, said display ~~means~~unit further zooms in on the image of the facilities which has been zoomed in.

8. (Currently Amended) The facility display apparatus according to claim 5, wherein said display ~~means~~unit zooms in on or rotates the image of the identified facilities at a zoom-in rate or rotation speed set by said setting~~means~~unit.

9. (Currently Amended) The facility display apparatus according to claim 5, wherein when receiving a redisplay request of the identified facilities from a user, said display ~~means-unit~~ three-dimensionally displays the image of the identified facilities on a wide-area map again, and zooms in on the image of the identified facilities and rotates the image of the identified facilities.

10. (Currently Amended) The facility display apparatus according to claim 1, wherein when receiving a detailed display request of the identified facilities from a user, said display ~~means-unit~~ displays an image of a destination in the identified facilities.

11. (Currently Amended) The facility display apparatus according to claim 1, wherein said display ~~means-unit~~ identifies a direction of the facilities identified by said facility identifying ~~means-unit~~ when viewed from a present position, and three-dimensionally displays the image of the identified facilities in accordance with the direction.

12. (Currently Amended) The facility display apparatus according to claim 1, wherein said display ~~means-unit~~ deemphasizes a display tone of surroundings of the facilities identified by said identifying ~~means-unit~~ as compared with a display tone of the facilities identified by said facility identifying ~~means-unit~~.

13. (Currently Amended) The facility display apparatus according to claim 12, wherein said display ~~means-unit~~ displays semitransparently or in monochrome an image of facilities surrounding the facilities identified by said facility identifying ~~means-unit~~.

14. (Currently Amended) The facility display apparatus according to claim 1, wherein said display ~~means-unit~~ displays an enlarged image of the facilities identified by said facility identifying ~~means-unit~~, and displays an image of facilities surrounding the facilities at a reduced or original ratio.

15. (Currently Amended) The facility display apparatus according to claim 1, wherein said display ~~means-unit~~ blinkingly displays the image of the facilities identified by said facility identifying ~~means-unit~~.

16. (Currently Amended) The facility display apparatus according to claim 1, wherein said display ~~means-unit~~ changes a color of display of the facilities identified by said facility identifying ~~means-unit~~ in accordance with a present time zone or weather, and changes a color of display of surroundings of the facilities in accordance with a present season.

17. (Currently Amended) The facility display apparatus according to claim 1, wherein said display ~~means-unit~~ displays guidance on the facilities identified by said facility identifying ~~means-unit~~.

18. (Currently Amended) The facility display apparatus according to claim 1, further comprising speech output ~~means-unit~~ for outputting speech guidance on the facilities identified by said facility identifying ~~means-unit~~.

19. (Currently Amended) The facility display apparatus according to claim 1, wherein said display ~~means-unit~~ displays a route from the present position to the destination or a parking lot of the destination besides the image of the facilities identified by said facility identifying ~~means-unit~~.

20. (Currently Amended) The facility display apparatus according to claim 1, further comprising:
 a facility data storing ~~means-unit~~ for storing image data and position data of the facilities,
 a map data storing ~~means-unit~~ for storing map data,
 wherein
 the facility identifying ~~means-unit~~ retrieves the image data and position data of the identified facilities from the facility data storing ~~means-unit~~,

the display ~~means-unit~~ displays the map according to map data retrieved from the map data storing ~~means-unit~~, and displays the image data retrieved by the facility identifying ~~means-unit~~ on the displayed map.

21. (Currently Amended) A facility display apparatus comprising:

a setting ~~means-unit~~ for setting a display mode of facilities selected by a user from a plurality of selectable display modes, the selectable display modes including a mode for displaying a map two-dimensionally and a mode for displaying a map three-dimensionally;

a facility data storing ~~means-unit~~ for storing image data of facilities;

a map data storing ~~means-unit~~ for storing map data for two-dimensional display and map data for three-dimensional display;

a facility identifying ~~means-unit~~ for identifying facilities at a point of interest selected by the user from a plurality of selectable points of interest, and for retrieving the image data of the identified facilities from the facility data storing ~~means-unit~~; and

a display ~~means-unit~~ displaying a map based on the map data retrieved from the map data storing means, and displaying on the map an image of the identified facilities based on the image data retrieved by said facility identifying ~~means-unit~~,

wherein:

the map illustrates a route from a present geographical location of the user to the point of interest, and wherein the identified facilities comprises at least one physical object with a fixed geographical location at the selected point of interest,

when the user selects the mode for displaying the map two-dimensionally, the map data for two-dimensional display is retrieved from the map data storing ~~means-unit~~ and used by the display ~~means-unit~~ to display the map, and

when the user selects the mode for displaying the map three-dimensionally, the map data for three-dimensional display is retrieved from the map data storing ~~means-unit~~ and used by the display ~~means-unit~~ to display the map, and the image data retrieved by the facility identifying ~~means-unit~~ is processed to provide a three-dimensional perspective view of the identified facilities from a viewing direction corresponding to a current position of the facility

display apparatus, such that the displayed image of the identified facilities changes as the viewing direction corresponding to the current position changes.

22. (Currently Amended) A computer-implemented method for displaying facilities in a facility display apparatus, the method comprising:

receiving via an input device a user selection of a display mode of facilities from a plurality of selectable display modes, the selectable display modes including a mode for displaying facilities as a moving picture and a mode for displaying facilities as a still picture;

receiving via an input device a user selection of a point of interest from a plurality of selectable points of interest,

identifying facilities at the selected point of interest selected, and retrieving image data from a storage device of the identified facilities;

displaying a map on a display device; and

displaying on the map at least one of a moving picture and a still picture of the identified facilities in accordance with the set display mode,

wherein:

the map illustrates a route from a present geographical location of the user to the selected point of interest;

when the user selects the mode for displaying facilities as a moving picture, said display means displays the moving picture of the identified facilities on the map, the moving picture automatically rotating a three-dimensional image of the identified facilities by a preset amount to provide multiple views of the identified facilities from multiple directions, the three-dimensional image being automatically rotated the same amount regardless of which facilities are identified and regardless of the user's geographical location while the moving picture is displayed, and

the identified facilities comprises at least one physical object having a fixed geographical location at the selected point of interest.

23. (New) The method according to claim 22, wherein said identifying step identifies the facilities to be displayed by recognizing speech of the user.

24. (New) The method according to claim 22, wherein said facility identifying step identifies the facilities to be displayed according to operation of input keys by the user.

25. (New) The method according to claim 22, further comprising:

three-dimensionally displaying an image of the facilities identified by said identifying step on a wide-area map, and zooming in on the displayed image of the facilities,

wherein the current position of the user is different than the location of the identified facilities with respect to the wide-area map.

26. (New) The method according to claim 25, wherein the displayed image of the identified facilities simultaneously with the zoom in, or after the zoom in is completed, when the mode for displaying facilities as a moving picture is selected by the user.

27. (New) The method according to claim 25, wherein a whole body of the facilities is maintained within a display area on the display device while the displayed image of the identified facilities is zoomed in.

28. (New) The method according to claim 25, further comprising:

when receiving an enlarged display request of the identified facilities from the user, further zooming in on the image of the facilities which has been zoomed in.

29. (New) The method according to claim 26, wherein said zoom in or rotation of the image of the identified facilities at a zoom-in rate or rotation speed selected by the user.

30. (New) The method according to claim 26, further comprising:

when receiving a redisplay request of the identified facilities from the user, repeating the steps of three-dimensionally displaying the image of the identified facilities on a wide-area map, zooming in on the image of the identified facilities, and rotating the image of the identified facilities.

31. (New) The method according to claim 22, further comprising:

when receiving a detailed display request of the identified facilities from the user, displaying an image of a destination in the identified facilities.

32. (New) The method according to claim 22, further comprising:

identifying a direction of the identified facilities when viewed from a present position, and three-dimensionally displaying the image of the identified facilities in accordance with the direction.

33. (New) The method according to claim 22, further comprising:

deemphasizing a display tone of surroundings of the identified facilities as compared with a display tone of the identified facilities.

34. (New) The method according to claim 33, further comprising:

displaying semitransparently or in monochrome an image of facilities surrounding the identified facilities.

35. (New) The method according to claim 22, further comprising:

displaying an enlarged image of the identified, and displaying an image of facilities surrounding the facilities at a reduced or original ratio.

36. (New) The method according to claim 22, further comprising:

blinkingly displaying an image of the facilities identified by said facility identifying unit.

37. (New) The method according to claim 22, further comprising:

changing a color of display of the identified facilities in accordance with a present time zone or weather, and changing a color of display of surroundings of the facilities in accordance with a present season.

38. (New) The method according to claim 22, further comprising:

displaying guidance on the identified facilities.

39. (New) The method according to claim 22, further comprising:

outputting speech guidance on the identified facilities.

40. (New) The method according to claim 22, further comprising:

displaying a route from the present position to the destination or a parking lot of the destination besides an image of the identified facilities.

41. (New) The method according to claim 22, further comprising:

storing image data and position data of the facilities in a facility data storing unit;

storing map data in a map data storing unit;

retrieving image data and position data of the identified facilities from the facility data storing unit; and

displaying the map according to map data retrieved from the map data storing unit, and displaying the image data retrieved by the facility identifying unit on the displayed map.
